

National FAA Safety Team presents:

AirVenture 2023 Forum - Adverse Weather Perception vs Reality

Weather-related accidents continue to result in the highest number of General Aviation fatalities each year. In many of these accidents, poor or improper pilot decision-making has been identified as a causal factor. Pilot perception of weather displays vs reality of the weather plays a vital role in their decision-making processes. Incorrect perception of weather displays could lead to pilots ignoring or misinterpreting external visual cues that require their attention and action to avoid hazardous weather. The purpose of this session is to discuss how perception vs reality could influence a pilot's inflight weather-related decision-making. We will discuss factors that affect pilot perception, influences of pilot weather perception, review accidents/incidents where the pilot relied on perception versus reality, and review tools available to identify, assess and mitigate risk.

WINGS/AMT credit available!

To receive WINGS/AMT credit fill out attendance sheet available at the Forum entrance.

Directions: The FAA Safety Center is centrally located on the EAA AirVenture grounds on the South side of the control tower. We are the large tan building with the rooftop deck facing the runway. Forums entrance is on the west side of the building.

Prior to attending a safety seminar, please review and abide by current CDC, State and local health guidelines.
